shippable

The small blue label shows the serial number

In 1988 Briggs & Stratton was a sponsor of the Summer Olympic games in Seoul Korea. This engine, Model 90702, featuring a float type carburetor on a small frame engine, was produced in a special production run. This engine was a forerunner of the CAD designed engines to come. Each of the engines were given a special Olympics serial number. We have two of these engines for sale. One in the original factory sealed box and one unboxed. The unboxed engine has the special serial number 10702. Unknown what the boxed engine serial number is.
